

*"My focus is on linking assessments to appropriate, individualized interventions. There's a lot of research going on at the university level, but that information isn't getting to the people who actually use it; the school systems, the teachers and the parents. I want to close that information gap so we can improve outcomes and save money. I understand the special education laws and I know what schools are looking for to qualify a student for special education services in public school systems."*

Nationally Certified School Psychologist with over 30 years experience in the field of school psychology and psycho-educational services:
